

# POOLED DISTRIBUTION FOR RETAIL

## *Excellence Through Teamwork*

ADC has the network, the resources and the expertise to provide exceptional Pooled Distribution services for your Retail applications. A passion for security, flexibility for your delivery requirements and the ability to integrate with your scan technologies are just some of the elements that combine to provide highly efficient Pooled Distribution services.

From the warehouse to your individual stores, each team member will provide you with outstanding, accurate, and high-quality service at every step of the process.

### **High-Level Security and Quality**

ADC stands ready to protect your inventory at every step of the delivery process. Our systems insure that your inventory will always be handled professionally and securely in a manner that you can depend on.

- **Expect Secure, Controlled Receiving and Delivery** – Your inventory will be received and processed in our secure facilities and delivered by an extensive network of satellite-controlled trucks throughout 7 states.
- **Count On Strict Adherence to Your Loss Prevention Requirements** - Our processing managers are passionate about accuracy and security. Your inventory is carefully monitored and tracked according to your specifications to make sure that each store receives the correct order every time.
- **Enjoy Consistent, Personal Delivery** – The same ADC driver will make your deliveries each day. This improves security and delivery times, since you don't have transfer delays. Your employees get to know our driver and the driver gets to know and care about the stores they serve.

### **Routing and Delivery Requirements**

ADC will meet your delivery specifications, manage your inbound bulk loads securely into our facility and accurately consolidate your outbound store shipments.

- **Easily Manage Your Bulk-Loaded Retail Orders** - We'll receive your bulk loaded retail orders for regional distribution, sort them according to your requirements, verify the data and quickly deliver them to your retail distribution points.
- **Control Your Sequential Routing and Delivery Requirements** - Whether your products require local delivery or long distance, we can sequentially route and deliver based on your specific service requirements.

Our mission is  
to provide  
a perfect  
service  
experience  
to our  
customers,  
and to be their  
#1 choice for  
logistics  
services.

- **Co-load and Re-direct Partial Loads** - We will co-load your LTL shipments to USPS facilities or other hub destinations and redirect your partial loads in a more efficient manner.

## **Integrated Technology and Data Handling**

ADC has set up an extensive network of receiving, processing and delivery equipment to ensure that our processes are integrated with your scan technology so that inventory gets to the right retail outlet every time, just as ordered. Using ADC equipment or yours, we will work hard to accurately receive, sort and deliver your inventory with quality checkpoints to each individual store. ADC's ability to accurately handle data and make timely deliveries has resulted in very high to perfect scores from our customers.

- **Inventory is Received Quickly and Accurately** – Inventory from multiple truckloads is received, scanned and sorted for individual store orders by our highly trained teams according to SOP processes. Strict quality control procedures prevent mis-sorts and boxes being scanned to incorrect pallet/store locations.
- **Guarantee Accurate Delivery with Enhanced Security Procedures** - Pallets are loaded into our trucks according to the outlined security procedures and delivered to each individual store. At the store, the pallet or box can be scanned (once again this varies by Pool) as it is delivered to verify correct inventory and, if required, data can be immediately uploaded to your servers.
