

WAREHOUSING

Excellence Through Teamwork

ADC has over 400,000 square feet of high bay, secured class A warehouse space in 3 states with the latest storage, inventory management and retrieval systems, ready to receive your inventory. We even have rail access if you need it.

We combine our Warehousing management services with our state-of-the-art Transportation and Fulfillment services to improve security, increase timeliness of deliveries and simplify your logistics management processes.

Our mission is
to provide
a perfect
service
experience
to our
customers,
and to be their
#1 choice for
logistics
services.

Warehousing Locations

With over 400,000 sq ft of warehouses, offices and buildings in 3 states (Utah, Colorado and New Mexico), ADC can provide you with a customized solution to store, transport and streamline your inventory management.

Salt Lake City, Utah

Our main facility in Salt Lake City has 234,000 sq ft, 34' high bay ceilings with both racked and floor storage space. It also has 60,000 sq ft of temperature controlled (refrigerated) racked space.

The perimeter is securely fenced with access-controlled gates; access to the warehouse is card controlled. For inventory that needs tighter security, it has separately fenced, higher security clearance areas with motorized package-handling equipment including conveyors, extendos and additional access controls.

Denver, Colorado

Our Denver facility has two buildings with over 70,000 square feet of high bay warehouse, motorized conveyors, extendos and office areas. Access controls are implemented to provide a highly secure environment.

The Salt Lake City and Denver locations have direct rail access with rail spurs and rail doors for convenient product shipment when needed.

Albuquerque, New Mexico

The Albuquerque facility has 30,000 square feet of high bay warehouse and office space with special control handling procedures for DEA controlled substances. It has motorized package handling conveyors, extendos and is also access controlled.

Additional Locations

ADC also operates four smaller cross dock operations with storage buildings and offices in Phoenix, Arizona; El Paso, Texas; Boise, Idaho; and Butte, Montana.

Warehouse Management Systems

We utilize a sophisticated Warehouse Management System called ASCtrac, which allows us to provide secure, accurate inventory management and high-end attention to detail.

ASCtrac has barcode printing and supports RF (radio frequency) handheld devices for picking and put away. ASCtrac allows us to give you access to your inventory via the internet through a special login.

- Inbound freight is received, checked carefully and logged into ASCtrac based on your receiving requirements.
- Goods can be unloaded by traditional forklift, squeeze lift, slip sheet lift or by hand and are then stored as specified for each type of inventory (pallets, racked, non-racked, etc.).
- Pallets or items are immediately barcoded and scanned at the put away position and logged into ASCtrac for later retrieval.
- When orders are received, ASCtrac directs the picker to the correct location, given your specific requirements (FIFO, LIFO, lot expiration, etc.). Orders are then staged for delivery by outside carriers or the ADC transportation network.

Our warehousing services allow you the choices and freedom to customize the solutions that are right for your inventory storage needs. We can pick up from the inter-modal rail yard or pick up any freight within our service area, carefully deliver it to our buildings, store it as needed, accurately pick your orders and then transport that freight to the end user.

Using ADC saves you time and money, and simplifies the whole process.
